

MAGLUMI[®] X Series

Fully-auto Chemiluminescence Immunoassay System

**All Balanced
and
Strong**

CORE TECHNOLOGY — X-TECH

MAGLUMI® X3

Save Your Space Without Compromise

Compatible with Small and Medium-sized Hospitals and Labs

200

Tests/Hour

< 0.68 m²

Positions

Small but strong

- The throughput per unit area is 294 T/h/m²
- Compatible with all MAGLUMI® reagents with perfect compatibility (256 parameters)

Low failure rate and accurate result

- Reaction cup can prevent light pollution, ensuring the accuracy of results
- Integrated packaging of cuvettes avoids the stuck, blockage and scratch
- TEFLON-coated pipetting needle is equipped with independent washing unit to avoid carry-over, ensuring accurate results

Excellent performance

- Advanced design of MAGLUMI® X3 ensures excellent performance, such as the latest intelligent washing technology and bidirectional temperature control measurement

Convenient and efficient

- No-pause loading/unloading of reagents/samples/reaction cups without waiting or interrupting tests
- Intuitive indicator lights make no need to check reagents and consumables frequently

Cost-efficient and intelligent

- Saving consumable cost by not using disposable Tips
- Pipetting needle with three error detection technologies (liquid level /clot /collision), reducing error rate

MAGLUMI® X6

Flexible Combination to Meet Various Needs

Targeted for Medium/High-volume Laboratory

Fast and cost-efficient

- 450 T/H with mid-size, suitable for medium- to high-volume laboratories
- Compatible with all MAGLUMI® reagents with perfect compatibility (256 parameters)

Convenience and high efficiency

- No-pause loading and unloading of reagents, samples and consumables without interrupting tests
- One-stop, one-side operation saving space and steps
- Intelligent SnibeLinker™ remote service solution ensures the fast response

Flexible combination according to requirements

- Sample positions can be expanded to 412 with additional sample area module
- Capable to link Total Laboratory Automation System (TLA)

User-friendly design

- Up to 2000 walk-away tests to avoid high frequency of manual intervention
- Dual-mode wash liquid preparation—automatic or manual
- Intelligent UI, user-friendly, easy and convenient operation

Advanced and accurate function

- A revolutionary pipetting volume of 10~280 µL with higher accuracy and low pipetting CV
- Four kinds of pipetting error detection technologies reduce sampling error rate

MAGLUMI® X8

Super-high Throughput CLIA Solution

Targeted for Large Labs, Chain Labs and Hospitals

Excellent performance

- One of the fastest CLIA analyzers with 600 T/H (Single module)
- Up to 2400 T/H (Four modules combined)
- Compatible with all **MAGLUMI®** reagents with perfect compatibility (256 parameters)

Saving manpower

- Long walk-away time—2800 tests, saves human labor greatly
- 2912 cuvettes loading in one time with fully-auto cuvette loader, no need to add frequently

Advanced intelligence

- Capable to link Laboratory Automation System (TLA/LAS)
- Capable to integrate with **Biossays® C8** (High-throughput Chemistry Analyzer) and decapper module

Considerate design

- Multidimensional indicator lights, real-time monitoring of analyzer's status from a distance
- Dual-mode wash liquid preparation—automatic or manual
- Automatic reagent cover plate and dual temperature mode reduce reagent volatilization and enhance the stability of reagent kits on board

Convenient operation

- User-friendly interface, easy and convenient operation
- No-pause loading and unloading of reagents, samples and consumables without interrupting tests

Outstanding Technologies — X-tech

■ Advanced Patented Pipetting Technology *

Patented pipetting technology for samples

- A revolutionary pipetting technology with highly accurate volume, ensuring reliable results
- Four kinds of pipetting error detection technologies (liquid level/clot/bubble/collision detection) reduce error rate

Disposable filtered Tips

- Integrated packaging of disposable filtered Tips ensures no cross-contamination and low failure rate, and avoids aerosol pollution
- One pipetting for multiple tests technology reduces test time and Tips cost

■ Accurate Incubation Technology

- **Non-contact mixing**
Before incubation, non-contact mixing with different modes ensures sufficient reaction
- **Accurate incubation**
Single cup design for each test with at least five-sided (X8 is 360°) heating at $37 \pm 0.3^{\circ}\text{C}$, makes accurate, quick and uniform incubation

* For X6 and X8

Outstanding Technologies — X-tech

■ Exclusive Intelligent Washing Technology

Independent washing units for waste liquid needles

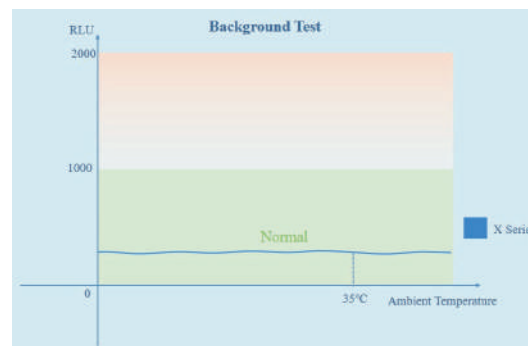

In the wash station, four waste liquid needles are equipped with four independent washing units to avoid the carry-over.

Magnetic separation washing and non-contact vortex mixing

Magnetic separation washing and non-contact vortex mixing units, with different mixing modes depending on different assays, ensure a sufficient washing to reduce the non-specific binding.

■ Stable and Accurate Measuring Chamber

Automatic temperature control in the measuring chamber can keep a stable background value, not affected by the ambient temperature, ensuring the accuracy of measurement results.

Outstanding Technologies — X-tech

■ Pioneer in Optional Wash Liquid Preparation*

Dual-mode wash liquid preparation—Automatic or Manual

- Select Auto mode on the software, connect the X6/X8 to the water purification system, minimize your operational burden
- If water purification system is not available, the wash liquid preparation can be done by manually mixing with pure water

■ Flexible Expansion Solutions*

- Same modules can be combined with high throughput and small space occupation
- Capable to integrate with Biossays® C8 (High-throughput Chemistry Analyzer)
- Capable to connect with decapper module

- Capable to link laboratory automation system (TLA/LAS)

* For X6 and X8

Key Technologies

CLIA uses two important technologies, one is the labelling technology which determines the reaction mode, and the other is a separation technology which determines the sensitivity, accuracy and precision of the reagents.

■ Labelling Technology

The **MAGLUMI®** system applies ABEI labels. ABEI is a non-enzyme small molecule with special molecular formula to enhance stability in acid and alkaline buffer. Using fast Chemiluminescence, ABEI's chemical reaction with sodium hydroxide (NaOH) and Hyperoxide (H_2O_2) finishes the process in 3 seconds.

Reaction Cup

■ Separation Technology

MAGLUMI® uses Magnetic Microbeads. As separation technology, it has been widely used in the field of CLIA. Compared with traditional separation technology, it has the following advantages:

- Shortening the reaction time by enlarging the reaction area of antigens and antibodies.
- Enhancing the sensitivity by better and faster capture of antigens and antibodies.
- Reducing inter or intra-assay discrepancies significantly by mixing the reagents thoroughly in a liquid separation platform.
- Enhancing the accuracy by absorbing antigens and antibodies through chemical reaction.
